The Enterprise Use Case

Amar Kapadia, Brandon Wick, Aarna Networks
Nephio Can Already Address the Enterprise

- Nephio is very effective for enterprise use cases in addition to telco
- Related, Nephio can orchestrate and manage cloud native applications in addition to xNFs

Nephio’s goal is to deliver carrier-grade, simple, open, Kubernetes-based cloud native intent automation and common automation templates that materially simplify the deployment and management of multi-vendor cloud infrastructure and network functions across large scale edge deployments. Nephio enables faster onboarding of network functions to production including provisioning of underlying cloud infrastructure with a true cloud native approach, and reduces costs of adoption of cloud and network infrastructure.
Proposal: Create an Ad-Hoc Enterprise Group

- Align with “hot” use cases and/or
- Align with “hot” communities
Hot Use Cases

- LLM Orchestration
- Security Orchestration (AccuKnox)
- Process industry automation (Ubicity)
- IoT (MicroShift/Portainer/K0s/K3s)
Hot Communities

- OpenTofu
LLM Orchestration

- LLM Orchestration e.g. Llama2 using a consistent API
- Network Services e.g. Cloud data sources, SD-WAN PoP
- Infra Orchestration e.g. Compute (bare metal or VMs), Storage, Kubernetes Cluster
Security Orchestration

- Securing ‘Cloudification’ of 5GC & RAN deployments in Public/Hybrid Cloud
  - Continuous SBOMs, microsegmentation, k8tls, etc
- Securing 5G Network Functions
  - K8s hardening, vuln. scanning, SBOMs, RBAC, least privilege, monitoring/logging and auditing
- Securing Edge deployments from distributed attack vectors
  - Process whitelisting, microsegmentation, file integrity with latency control
- Securing O-RAN open fronthaul
  - MobiFlow Auditor records L3 protocol state transitions & base stations aggregate statistics and a Security focused Service Model (secSM)
Security Orchestration

- Securing O-RAN nearRT-RIC
  - Auto-discover RIC behavior and govern via auto-created policies, Control plane xAPP having runtime IDS
- Securing Network Slicing
- 5G Supply Chain Security
- Security orchestration from O-RAN SMO to near-RT RIC and xAPPs
IoT Cloud Native Application Orchestration

Edge Clusters

Cloud Native Application Orchestration & Mgmt.

Nephio Cloud
OpenTofu + Nephio = Better Together

Nephio can bring a slew of valuable features to OpenTofu for edge (and cloud) use cases:

- Declarative intent (covert IaC to IaD)
- Business intent -> technical intent mutation
- Scale via pull model
- Dependency handling
- Constant state reconciliation
- Rollback
Call To Action

Join us

- Pick use case(s)
- Start working on quick win demos
THANK YOU!
